## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 8-11, 14 and 17-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Regarding claim 8, the limitation "shirt distance wiring connected to the gate electrodes and formed over the first insulating film" is not supported in the originally filed disclosure. Therefore, this limitation is deemed to be new matter.

Claims 9-11, 14 and 17-20 are also rejected due to their dependency upon the rejected base claim 8.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 8-11, 14 and 17-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 8, it is not understood how the so-called short distance wiring is connected to the gate electrodes and formed over the first insulating film. In figures 3 of the instant application, the short wiring (i.e. element 35) is only connected to the source/drain region 16, 19, not to the gate electrodes as claimed.

Claims 9-11, 14 and 17-20 are also rejected due to their dependency upon the rejected base claim 8.

#### ***Allowable Subject Matter***

Claims 21- 26 are allowed.

#### ***Response to Arguments***

Applicant's arguments filed on 10/03/2005 have been fully considered but they are not persuasive.

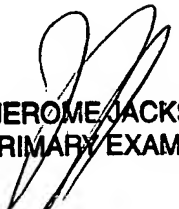

With respect to claim 8, applicant argues the new limitation "a short distance wiring connected to the gate electrodes and formed over the first insulating film" is described in page 13, line 2 to page 14, line and in page 16, lines 9-12 of the specification of the present application. However, nowhere is this limitation defined in such a manner one of ordinary skill in the art can understand. As mentioned above, it is clearly shown in figures 3 of the instant application that the short wiring (i.e. element 35) is only connected to the source/drain region 16, 19, not to the gate electrodes as claimed.
